

Improve your round efficiency

It is difficult to balance a shrinking budget whilst keeping your staff and customers happy. We give you the support you need to plan rounds quickly and effectively; reducing operational costs and increasing employee engagement.

Round balancing options

Owing to resource cuts, waste departments have limited options available when it comes to round planning and design. These options generally sit within two categories; paper maps and route optimising software. We provide an alternative and unique approach to support your round balancing decisions.

Current options

Paper maps

- ✓ Includes crews' knowledge
- ✓ Well proven process
- ✗ Hard to update
- ✗ Difficult to measure
- ✗ Not data driven

Routing software

- ✓ Optimises routing automatically
- ✗ Excludes crews' knowledge
- ✗ Expensive to buy
- ✗ Difficult to maintain
- ✗ Requires specialist resources

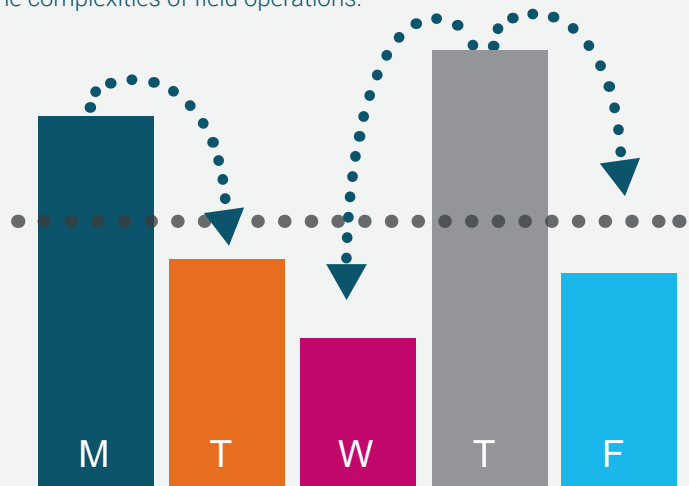

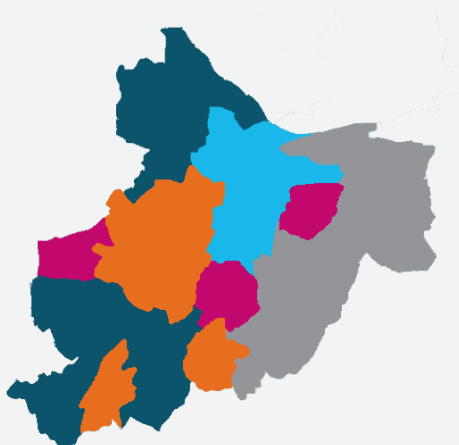

Round Design Support

- ✓ Reduced operational costs
- ✓ Fairer work balance for your teams
- ✓ Faster project speed and flexibility
- ✓ Better visibility of your operations
- ✓ Ability to test scenarios

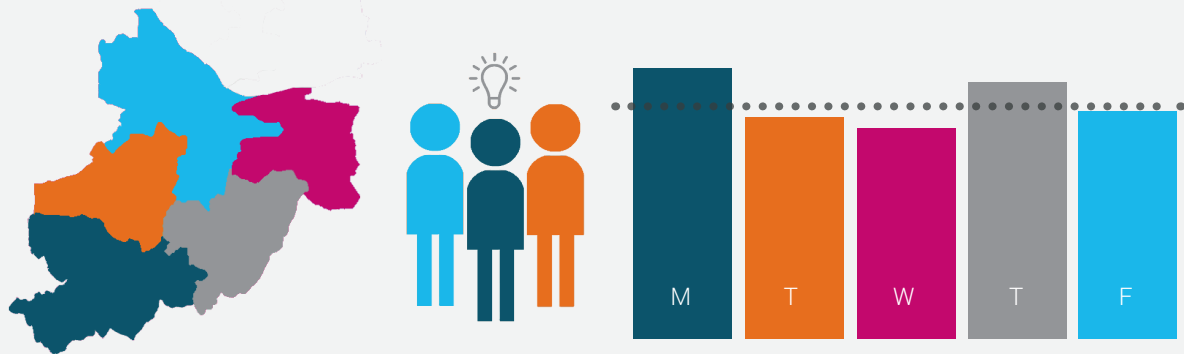

We provide the right balance

Our collaborative solution helps you re-balance your rounds by integrating important geographical, property and tonnage data with the invaluable local knowledge of your crews.

Our extensive experience in solving complex mapping business problems means our services include specialist methodologies used by a team that truly understands the complexities of field operations.

How we deliver your project

Review

Initial analysis

The project begins with an initial analysis so that we can understand the environment you work in and establish project goals and outcomes.

Build

Create street areas

Our team builds fit-for-purpose operational street zones within your collection areas. This creates a framework for us to input the property and tonnage data.

Merge

Plot current rounds

Working with your team, we then plot your current rounds into the street areas so we can identify which areas need to be re-balanced.

Re-balance

Build new rounds

With a complete view of your operations, we can now start the analysis and work with you to re-balance and optimise your rounds using both practical and data driven insight.

Hand Over

Enable change

Once your rounds are balanced you are left with an easy-to-manage system that can be used by your teams for future reviews, updates or analysis.
